Abstract

Life on Earth is sustained by complex interactions between organisms and their environment. These biotic interactions can be captured in datasets and published digitally. We present a review and archiving process for such an openly accessible digital interactions dataset of known origin and discuss its outcome. The dataset under review, named diatomsRcool/yellowstone_grizzly, has fingerprint hash://md5/12002698c4ef721987a41ba4597d8a12, is 92.8KiB in size and contains 254 interactions with 1 unique type of association (e.g., eats) between 1 primary taxon (e.g., *Ursus arctos*) and 254 associated taxa (e.g., *Abies lasiocarpa* var. *lasiocarpa*). This report includes detailed summaries of interaction data, a taxonomic review from multiple catalogs, and an archived version of the dataset from which the reviews are derived.

Introduction

Data Review and Archive

Data review and archiving can be a time-consuming process, especially when done manually. This review report aims to help facilitate both activities. It automates the archiving of datasets, including Darwin Core archives, and is a citable backup of a version of the dataset. Additionally, an automatic review of species interaction claims made in the dataset is generated and registered with Global Biotic Interactions (J. H. Poelen, Simons, and Mungall 2014).

This review includes summary statistics about, and observations about, the dataset under review :

Gunther KA et al. 2014 Dietary breadth of grizzly bears
in the Greater Yellowstone Ecosystem. *Ursus* 25(1):60-72
https://zenodo.org/records/266827/files/diatomsRcool/yellowstone_grizzly-1.0.0.zip 2026-01-23T23:21:55.287Z hash://md5/12002698c4ef721987a41ba4597d8a12

For additional metadata related to this dataset, please visit https://github.com/diatomsRcool/yellowstone_grizzly and inspect associated metadata files including, but not limited to, *README.md*, *eml.xml*, and/or *globi.json*.

Methods

The review is performed through programmatic scripts that leverage tools like Preston (Elliott et al. 2025), Elton (Kuhn, Poelen, and Leinweber 2025), Nomer (Salim and Poelen 2025), globinizer (J. Poelen, Seltmann, and Mietchen 2024) combined with third-party tools like `grep`, `mlr`, `tail` and `head`.

Table 1: Tools used in this review process

tool name	version
preston	0.11.1
elton	0.16.4
nomer	0.5.17
globinizer	0.4.0
mlr	6.0.0
jq	1.6
yq	4.25.3
pandoc	3.1.6.1
duckdb	1.3.1
mapserver	7.6.4

The review process can be described in the form of the script below ¹.

```
# get versioned copy of the dataset (size approx. 92.8KiB) under review
elton pull diatomsRcool/yellowstone_grizzly

# generate review notes
elton review diatomsRcool/yellowstone_grizzly\
> review.tsv

# export indexed interaction records
elton interactions diatomsRcool/yellowstone_grizzly\
> interactions.tsv

# export names and align them with the Catalogue of Life using Nomer
elton names diatomsRcool/yellowstone_grizzly\
| nomer append col\
> name-alignment.tsv
```

or visually, in a process diagram.

You can find a copy of the full review script at [check-data.sh](#). See also [GitHub](#) and [Codeberg](#).

¹Note that you have to first get the data (e.g., via `elton pull diatomsRcool/yellowstone_grizzly`) before being able to generate reviews (e.g., `elton review diatomsRcool/yellowstone_grizzly`), extract interaction claims (e.g., `elton interactions diatomsRcool/yellowstone_grizzly`), or list taxonomic names (e.g., `elton names diatomsRcool/yellowstone_grizzly`)

Figure 1: Review Process Overview

Results

In the following sections, the results of the review are summarized ². Then, links to the detailed review reports are provided.

Files

The following files are produced in this review:

Biotic Interactions

Figure 2: Biotic Interaction Data Model

In this review, biotic interactions (or biotic associations) are modeled as a primary (aka subject, source) organism interacting with an associate (aka object, target) organism. The dataset under review classified the primary/associate organisms with specific taxa. The primary and associate organisms The kind of interaction is documented as an interaction type.

The dataset under review, named *diatomsRcool/yellowstone_grizzly*, has fingerprint hash://md5/12002698c4ef721987a41ba4597d8a12, is 92.8KiB in size and contains 254 interactions with 1 unique type of association (e.g., eats) between 1 primary taxon (e.g., *Ursus arctos*) and 254 associated taxa (e.g., *Abies lasiocarpa* var. *lasiocarpa*).

An exhaustive list of indexed interaction claims can be found in gzipped csv, tsv, geopackage and parquet archives. To facilitate discovery, a preview of claims available in the gzipped html page at [indexed-interactions.html.gz](#) are shown below.

The exhaustive list was used to create the following data summaries below.

Table 3: Sample of Indexed Interaction Claims

sourceTaxonName	interactionType	targetTaxonName	referenceCitation
Ursus arctos	eats	Abies lasiocarpa var. lasiocarpa	BLANCHARD, B.M. 1983. Grizzly bear-habitat relationships in the Yellowstone area. International Conference on Bear Research and Management 5:118-123.
Ursus arctos	eats	Picea engelmannii	BLANCHARD, B.M. 1983. Grizzly bear-habitat relationships in the Yellowstone area. International Conference on Bear Research and Management 5:118-123.

Interaction Networks

The figures below provide a graph view on the dataset under review. The first shows a summary network on the kingdom level, and the second shows how interactions on the family level. It is important to note that both network graphs were first aligned taxonomically using the Catalogue of Life. Please refer

to the original (or verbatim) taxonomic names for a more original view on the interaction data.

You can download the indexed dataset under review at [indexed-interactions.csv.gz](#). A tab-separated file can be found at [indexed-interactions.tsv.gz](#)

Geospatial Distribution

If geospatial information was extracted from the dataset under review, the map below will show their distribution.

Hexagonal grid cells indicate that interactions claims are available for selected geospatial area: light yellow means relatively fewer claims, dark green relatively more claims.

Figure 5: Hexagonal grid cells indicate that interactions claims are available for selected geospatial area: light yellow means relatively fewer claims, dark green relatively more claims.

Associated data can be found in the geopackage files at [indexed-interactions.gpkg](#) for point data and [indexed-interactions-h3.gpkg](#) for data clustered in geospatial h3 hexagonals.

Learn more about the structure of this download at [GloBI website](#), by opening a [GitHub issue](#), or by sending an email.

Another way to discover the dataset under review is by searching for it on the [GloBI website](#).

Taxonomic Alignment

As part of the review, all names are aligned against various name catalogs (e.g., col, ncbi, discoverlife, gbif, itis, wfo, mdd, tpt, pbdb, and worms). These alignments can help review name usage or aid in selecting of a suitable taxonomic name resource.

Table 8: Sample of Name Alignments

providedName	relationName	resolvedCatalogName	resolvedName
Maianthemum stellatum	HAS_ACCEPTED	col	Maianthemum stellatum
Prosartes trachycarpa	HAS_ACCEPTED	col	Prosartes trachycarpa
Juniperus horizontalis	HAS_ACCEPTED	col	Juniperus horizontalis
Juniperus scopulorum	HAS_ACCEPTED	col	Juniperus scopulorum

Table 9: Distribution of Taxonomic Ranks of Aligned Names by Catalog. Names that were not aligned with a catalog are counted as NAs. So, the total number of unaligned names for a catalog will be listed in their NA row.

resolvedCatalogName	resolvedRank	count
col	NA	13
col	family	1
col	genus	45
col	species	193
col	subspecies	5
discoverlife	NA	253
discoverlife	species	1
gbif	NA	9

wfo	species	135
worms	NA	171
worms	family	1
worms	genus	22
worms	species	60

Table 10: Name relationship types per catalog. Name relationship type “NONE” means that a name was not recognized by the associated catalog. “SAME_AS” indicates either a “HAS_ACCEPTED_NAME” or “SYNONYM_OF” name relationship type. We recognize that “SYNONYM_OF” encompasses many types of nomenclatural synonymies (ICZN 1999) (e.g., junior synonym, senior synonyms).

resolvedCatalogName	relationName	count
col	HAS_ACCEPTED_NAME	235
col	SYNONYM_OF	37
col	NONE	13
discoverlife	NONE	254
discoverlife	HAS_ACCEPTED_NAME	1

worms	associated names alignments report in gzipped html, csv, and tsv)

Additional Reviews

Elton, Nomer, and other tools may have difficulties interpreting existing species interaction datasets. Or, they may misbehave, or otherwise show unexpected behavior. As part of the review process, detailed review notes are kept that document possibly misbehaving, or confused, review bots. An sample of review notes associated with this review can be found below.

Table 12: First few lines in the review notes.

reviewDate	reviewCommentType	reviewComment

2026-01-29T03:56:45Z	summary	254 info(s)

In addition, you can find the most frequently occurring notes in the table below.

: Most frequently occurring review notes, if any.

For additional information on review notes, please have a look at the first 500 Review Notes in html format or the download full gzipped csv or tsv archives.

GloBI Review Badge

As part of the review, a review badge is generated. This review badge can be included in webpages to indicate the review status of the dataset under review.

Figure 6: Picture of a GloBI Review Badge ³

Note that if the badge is green, no review notes were generated. If the badge is yellow, the review bots may need some help with interpreting the species interaction data.

GloBI Index Badge

If the dataset under review has been registered with GloBI, and has been successfully indexed by GloBI, the GloBI Index Status Badge will turn green. This means that the dataset under review was indexed by GloBI and is available through GloBI services and derived data products.

Figure 7: Picture of a GloBI Index Badge ⁴

If you'd like to keep track of reviews or index status of the dataset under review, please visit GloBI's dataset index ⁵ for badge examples.

Discussion

This review and archive provides a means of creating citable versions of datasets that change frequently. This may be useful for dataset managers, including natural history collection data managers, as a backup archive of a shared Darwin Core archive. It also serves as a means of creating a trackable citation for the dataset in an automated way, while also including some information about the contents of the dataset.

This review aims to provide a perspective on the dataset to aid in understanding of species interaction claims discovered. However, it is important to note that

³Up-to-date status of the GloBI Review Badge can be retrieved from the GloBI Review Depot

⁴Up-to-date status of the GloBI Index Badge can be retrieved from GloBI's API

⁵At time of writing (2026-01-29) the version of the GloBI dataset index was available at <https://globalbioticinteractions.org/datasets>

this review does *not* assess the quality of the dataset. Instead, it serves as an indication of the open-ness⁶ and FAIRness (Wilkinson et al. 2016; Trekels et al. 2023) of the dataset: to perform this review, the data was likely openly available, **F**indable, **A**ccessible, **I**nteroperable and **R**eusable. The current Open-FAIR assessment is qualitative, and a more quantitative approach can be implemented with specified measurement units.

This report also showcases the reuse of machine-actionable (meta)data, something highly recommended by the FAIR Data Principles (Wilkinson et al. 2016). Making (meta)data machine-actionable enables more precise processing by computers, enabling even naive review bots like Nomer and Elton to interpret the data effectively. This capability is crucial for not just automating the generation of reports, but also for facilitating seamless data exchanges, promoting interoperability.

Acknowledgements

We thank the many humans that created us and those who created and maintained the data, software and other intellectual resources that were used for producing this review. In addition, we are grateful for the natural resources providing the basis for these human and bot activities. Also, thanks to <https://github.com/zygoballus> for helping improve the layout of the review tables.

Author contributions

Nomer was responsible for name alignments. Elton carried out dataset extraction, and generated the review notes. Preston tracked, versioned, and packaged, the dataset under review.
