### Abstract

Life on Earth is sustained by complex interactions between organisms and their environment. These biotic interactions can be captured in datasets and published digitally. We present a review and archiving process for such an openly accessible digital interactions dataset of known origin and discuss its outcome. The dataset under review, named `globalbioticinteractions/sabina2022`, has fingerprint hash://md5/eded49380b17b65a120ecb11e39b7114, is 275KiB in size and contains 869 interactions with 1 unique type of association (e.g., `pollinatedBy`) between 30 primary taxa (e.g., *Euterpe oleracea*) and 458 associated taxa (e.g., *Undetermined*). This report includes detailed summaries of interaction data, a taxonomic review from multiple catalogs, and an archived version of the dataset from which the reviews are derived.

## Introduction

### Data Review and Archive

Data review and archiving can be a time-consuming process, especially when done manually. This review report aims to help facilitate both activities. It automates the archiving of datasets, including Darwin Core archives, and is a citable backup of a version of the dataset. Additionally, an automatic review of species interaction claims made in the dataset is generated and registered with Global Biotic Interactions (J. H. Poelen, Simons, and Mungall 2014).

This review includes summary statistics about, and observations about, the dataset under review:

## Methods

The review is performed through programmatic scripts that leverage tools like Preston (Elliott et al. 2025), Elton (Kuhn, Poelen, and Leinweber 2025), Nomer (Salim and Poelen 2025), globinizer (J. Poelen, Seltmann, and Mietchen 2024) combined with third-party tools like grep, mlr, tail and head.

Table 1: Tools used in this review process

| tool name  | version |
|------------|---------|
| preston    | 0.10.1  |
| elton      | 0.15.13 |
| nomer      | 0.5.17  |
| globinizer | 0.4.0   |
| mlr        | 6.0.0   |
| jq         | 1.6     |
| yq         | 4.25.3  |
| pandoc     | 3.1.6.1 |
| duckdb     | 1.3.1   |

The review process can be described in the form of the script below <sup>1</sup>.

```
# get versioned copy of the dataset (size approx. 275KiB) under review
elton pull globalbioticinteractions/sabina2022

# generate review notes
elton review globalbioticinteractions/sabina2022\
  > review.tsv

# export indexed interaction records
elton interactions globalbioticinteractions/sabina2022\
  > interactions.tsv

# export names and align them with the Catalogue of Life using Nomer
elton names globalbioticinteractions/sabina2022\
  | nomer append col\
  > name-alignment.tsv
```

or visually, in a process diagram.

You can find a copy of the full review script at `check-data.sh`. See also GitHub and Codeberg.

---

<sup>1</sup>Note that you have to first get the data (e.g., via `elton pull globalbioticinteractions/sabina2022`) before being able to generate reviews (e.g., `elton review globalbioticinteractions/sabina2022`), extract interaction claims (e.g., `elton interactions globalbioticinteractions/sabina2022`), or list taxonomic names (e.g., `elton names globalbioticinteractions/sabina2022`)

## Archived Dataset

Note that *data.zip* file in this archive contains the complete, unmodified archived dataset under review.

## Biotic Interactions

In this review, biotic interactions (or biotic associations) are modeled as a primary (aka subject, source) organism interacting with an associate (aka object, target) organism. The dataset under review classified the primary/associate organisms with specific taxa. The primary and associate organisms The kind of interaction is documented as an interaction type.

The dataset under review, named *globalbioticinteractions/sabina2022*, has fin-

Figure 2: Biotic Interaction Data Model

gerprint hash://md5/eded49380b17b65a120ecb11e39b7114, is 275KiB in size and contains 869 interactions with 1 unique type of association (e.g., pollinatedBy) between 30 primary taxa (e.g., *Euterpe oleracea*) and 458 associated taxa (e.g., *Undetermined*).

An exhaustive list of indexed interaction claims can be found in gzipped csv, tsv and parquet archives. To facilitate discovery, a preview of claims available in the gzipped html page at [indexed-interactions.html.gz](#) are shown below.

The exhaustive list was used to create the following data summaries below.

Table 3: Sample of Indexed Interaction Claims

| sourceTaxonName  | interactionTypeName | targetTaxonName       | referenceCitation                        |
|------------------|---------------------|-----------------------|------------------------------------------|
| Euterpe oleracea | pollinatedBy        | Morphospecies 1       | Giannini et al.2015; Bezerra et al. 2020 |
| Euterpe oleracea | pollinatedBy        | Diabrotica illigeri   | Giannini et al.2015; Bezerra et al. 2020 |
| Euterpe oleracea | pollinatedBy        | Diabrotica interrupta | Giannini et al.2015; Bezerra et al. 2020 |
| Euterpe oleracea | pollinatedBy        | Diabrotica sp. 1      | Giannini et al.2015; Bezerra et al. 2020 |

Table 4: Most Frequently Mentioned Interaction Types (up to 20 most frequent)

| interactionTypeName | count |
|---------------------|-------|
| pollinatedBy        | 869   |

Table 5: Most Frequently Mentioned Primary Taxa (up to 20 most frequent)

| sourceTaxonName        | count |
|------------------------|-------|

| Euterpe oleracea       | pollinatedBy        | Diabrotica illigeri    | 2     |
| Euterpe oleracea       | pollinatedBy        | Diabrotica interrupta  | 2     |

## Interaction Networks

The figures below provide a graph view on the dataset under review. The first shows a summary network on the kingdom level, and the second shows how interactions on the family level. It is important to note that both network graphs were first aligned taxonomically using the Catalogue of Life. Please refer to the original (or verbatim) taxonomic names for a more original view on the interaction data.

You can download the indexed dataset under review at [indexd-interactions.csv.gz](https://indexd-interactions.csv.gz). A tab-separated file can be found at [indexd-interactions.tsv.gz](https://indexd-interactions.tsv.gz)

Learn more about the structure of this download at GloBI website, by opening a GitHub issue, or by sending an email.

Another way to discover the dataset under review is by searching for it on the GloBI website.

## Taxonomic Alignment

As part of the review, all names are aligned against various name catalogs (e.g., col, ncbi, discoverlife, gbif, itis, wfo, mdd, tpt, pbdb, and worms). These alignments can help review name usage or aid in selecting of a suitable taxonomic name resource.

Table 8: Sample of Name Alignments

| providedName       | relationName      | resolvedCatalogName | resolvedName       |
|--------------------|-------------------|---------------------|--------------------|
| Acalyptinae        | NONE              | col                 | Acalyptinae        |
| Acnella oleracea   | HAS_ACCEPTED_NAME | col                 | Acnella oleracea   |
| Acrocomia aculeata | HAS_ACCEPTED_NAME | col                 | Acrocomia aculeata |
| Aellopos fadus     | HAS_ACCEPTED_NAME | col                 | Aellopos fadus     |

Table 9: Distribution of Taxonomic Ranks of Aligned Names by Catalog. Names that were not aligned with a catalog are counted as NAs. So, the total number of unaligned names for a catalog will be listed in their NA row.

| resolvedCatalogName | resolvedRank | count |
|---------------------|--------------|-------|
| col                 | NA           | 87    |
| col                 | family       | 7     |

Table 10: Name relationship types per catalog. Name relationship type “NONE” means that a name was not recognized by the associated catalog. “SAME\_AS” indicates either a “HAS\_ACCEPTED\_NAME” or “SYNONYM\_OF” name relationship type. We recognize that “SYNONYM\_OF” encompasses many types of nomenclatural synonymies (ICZN 1999) (e.g., junior synonym, senior synonyms).

| resolvedCatalogName | relationName      | count |

## Additional Reviews

Elton, Nomer, and other tools may have difficulties interpreting existing species interaction datasets. Or, they may misbehave, or otherwise show unexpected behavior. As part of the review process, detailed review notes are kept that document possibly misbehaving, or confused, review bots. An sample of review notes associated with this review can be found below.

Table 12: First few lines in the review notes.

| reviewDate           | reviewCommentType | reviewComment                                                                                                               |

In addition, you can find the most frequently occurring notes in the table below.

: Most frequently occurring review notes, if any.

For additional information on review notes, please have a look at the first 500 Review Notes in html format or the download full gzipped csv or tsv archives.

## GloBI Review Badge

As part of the review, a review badge is generated. This review badge can be included in webpages to indicate the review status of the dataset under review.

Figure 5: Picture of a GloBI Review Badge <sup>3</sup>

Note that if the badge is green, no review notes were generated. If the badge is yellow, the review bots may need some help with interpreting the species interaction data.

<sup>3</sup>Up-to-date status of the GloBI Review Badge can be retrieved from the GloBI Review Depot

## GloBI Index Badge

If the dataset under review has been registered with GloBI, and has been successfully indexed by GloBI, the GloBI Index Status Badge will turn green. This means that the dataset under review was indexed by GloBI and is available through GloBI services and derived data products.

Figure 6: Picture of a GloBI Index Badge <sup>4</sup>

If you'd like to keep track of reviews or index status of the dataset under review, please visit GloBI's dataset index <sup>5</sup> for badge examples.

## Discussion

This review and archive provides a means of creating citable versions of datasets that change frequently. This may be useful for dataset managers, including natural history collection data managers, as a backup archive of a shared Darwin Core archive. It also serves as a means of creating a trackable citation for the dataset in an automated way, while also including some information about the contents of the dataset.

This review aims to provide a perspective on the dataset to aid in understanding of species interaction claims discovered. However, it is important to note that this review does *not* assess the quality of the dataset. Instead, it serves as an indication of the open-ness<sup>6</sup> and FAIRness (Wilkinson et al. 2016; Trekels et al. 2023) of the dataset: to perform this review, the data was likely openly available, **F**indable, **A**ccessible, **I**nteroperable and **R**eusable. The current Open-FAIR assessment is qualitative, and a more quantitative approach can be implemented with specified measurement units.

This report also showcases the reuse of machine-actionable (meta)data, something highly recommended by the FAIR Data Principles (Wilkinson et al. 2016). Making (meta)data machine-actionable enables more precise processing by computers, enabling even naive review bots like Nomer and Elton to interpret the data effectively. This capability is crucial for not just automating the generation of reports, but also for facilitating seamless data exchanges, promoting interoperability.

---

<sup>4</sup>Up-to-date status of the GloBI Index Badge can be retrieved from GloBI's API

<sup>5</sup>At time of writing (2025-07-16) the version of the GloBI dataset index was available at <https://globalbioticinteractions.org/datasets>

<sup>6</sup>According to <http://opendefinition.org/>: "Open data is data that can be freely used, reused and redistributed by anyone - subject only, at most, to the requirement to attribute and sharealike."

## Acknowledgements

We thank the many humans that created us and those who created and maintained the data, software and other intellectual resources that were used for producing this review. In addition, we are grateful for the natural resources providing the basis for these human and bot activities. Also, thanks to <https://github.com/zygoballus> for helping improve the layout of the review tables.

## Author contributions

Nomer was responsible for name alignments. Elton carried out dataset extraction, and generated the review notes. Preston tracked, versioned, and packaged, the dataset under review.
