

ALGAL COLLECTIONS IN CENTRAL NATIONAL HERBARIUM (CAL)

PURABI BHATTACHARYA AND R.K. GUPTA

Botanical Survey of India, Howrah 711 103

ABSTRACT

The paper enumerates the algal collection housed in Central National Herbarium (CAL). These are referable to 986 species belonging to 249 genera under 115 families spread over seven classes of algae viz., Bacillariophyceae, Chlorophyceae, Chrysophyceae, Cyanophyceae, Euglenophyceae, Phaeophyceae and Rhodophyceae.

Key words: Algal collections, CAL

INTRODUCTION

The first record of algal collection in India is that of J.G. Koenig who visited India in 1768, as a member of the Moravian Mission and collected a number of algae from Tranquebar, South India, which were later described by Jones (1798) and other workers Borgesen, (1930, 1931); Bruhl & Biswas, (1926); and Carter, (1926). During the nineteenth century, there was spurt in the study of Indian algae when almost all the contributors except Kirtikar (1886) were Europeans.

A number of expeditions were undertaken with the purpose of studying the algae viz., Galathea Expedition (1845 - 1847), Novara Expedition (1857 - 1859), Preussische Expedition (1859 - 1863), Investigator Expedition (1890 - 1892), Valdivia Expedition (1898 - 1899) and Siboga Expedition (1899 - 1900), etc. During this period, many European workers visited and collected the algae from India and abroad and some of these collections were deposited in the then Herbarium of Botanical Survey of India, now known as Central National Herbarium under the acronym CAL. Most of the algal samples were collected by European workers viz., L. Rabenhorst, J.B. Wilson, D. Prains, J. Schiller, A. Hanscirg, H.S. Kurz, G. Thuret, G.O. Allen and S. Stockmeyer from different areas of Europe, India, Romania, Pegu, Rangoon, Austria, Australia, Hawaiian Islands and Bosnia. Several specimens of algae of other countries were also received through gift or on exchange basis from time to time by CAL. These also include collections by Indian botanists like K.P. Biswas and K.S. Srinivasan. made from different parts of India viz., Andaman, Okhamondal, Cape Comorine, Krusadi Island, Dwaraka and West Bengal are also deposited in CAL.

These specimens are valuable asset for the country and need to be digitized to make them easily accessible to algal taxonomists across the world, while ensuring their long term preservation in CAL well as in the form of digital database for the progress in the field of phycological research.

ENUMERATION

Sl. No.	Name of the Species	Class	Family	Date of Collection	Field No.	Collector	Locality	Accn. No.

केंद्रीय राष्ट्रीय पादपालय (CAL) में शैवाल पादपालय

पूरबी भट्टाचार्य एवं आर.के. गुप्ता
भारतीय वनस्पति सर्वेक्षण, हावड़ा

सार संक्षेप

केंद्रीय राष्ट्रीय पादपालय (CAL) के शैवाल संग्रह की गणना की गई है। शैवाल के 7 वर्गों यथा; बेसिलेरिओफाइसी, क्लोरोफाइसी, क्राइसोफाइसी, साइनोफाइसी, यूग्लेनोफाइसी, फेइओफाइसी एवं रोडोफाइसी में व्याप्त 249 वंशों एवं 115 कुलों के कुल 986 जातियों के अभिलेखन हुए।
