## Circa Dufouream animadversio. Scripsit W. Nylander.

In mea Recogn. monogr. Ramalinarum dixi, p. 77: *Dufourea* (Ach.) Nyl. Syn. I. p. 287, vere accedit et textura thallina (strato corticali similiter constructo) et spermogoniis (sterigmatibus spermatiisque subsimilibus) cum *Dactylina* Nyl. ibid., p. 286. Forsan autem cl. Zuckerman modum excedit, ambos pungens sub uno eodemque genere, male rejiciens nomen *Dufouream* typo adscriptum *Dufourea madreporiformis*; nam etiamsi Acharius nominaverit *Parmeliam molluscam* suae Methodi in Lichenographica universali *Dufouream*, hacce specie deinde a cl. De Notaris generi alii, *Combeae*, adducta disjuntaque, nihil obstat, quin *Dufourea* remaneat sensu, quo nomen illud pro *D. madreporiformi* Ach. adhibui et quo sensu limitibus genericis in Synopsi mea datis conservandum sit, saltem usquedum apothecia inveniantur.“ Contigit vero, ut hunc Lichenem fertilem (tamquam solum hodie videre licuit e Flora 1870, n. 21, nam antea, ob bella tempore praeterlapso peracta, ephemeris illa me adtingere non potuerat) in alpe Grand-Muveran Helvetiae invenerit cl. J. Müller, qui auctor apothecia describit. Simul animadversiones systematicas vel de momento systematico ejusdem Lichenis sane parum consideratas vel omnino erroneas affert, quod verbis paucis indigitare decet, nam censeo equidem errores esse castigandos.

Apotheciorum similem agnoscit structuram ac praebent apothecia *Everniarum*, at affinitatem cum *Evernieis* accipere non

1) 1854. —: „*Glinus lotoides* Löfl. *z. candida* Fnzl. forma *prostrata* Zoll. herb. 744; *certe Tryphera prostrata* Bl.!!“
