Author name change policy	19

Before you start

Plant Pathology publishes research papers and critical reviews on all aspects of plant pathology, both online and in nine printed issues each year. The Senior Editor particularly welcomes papers that apply the scientific method, describing not only the collection and interpretation of data but also the critical testing of hypotheses. Letters to the Editor are welcome when these comment on matters relevant to plant pathology.

Plant Pathology does **not** generally publish new disease reports; results of regional surveys; efficacy tests of fungicides, biological control agents, or plant extracts; or optimisation of computer programs unless these are deemed to be particularly original/significant findings and/or include some additional components of hypothesis testing.

Only papers written in English are accepted. They must not be under consideration, or accepted, for publication elsewhere.

Plant Pathology will consider for articles previously available as preprints; authors are requested to update any prepublication versions with a link to the final published article.

Plant Pathology is a 'hybrid' journal offering access to articles via reader subscription and/or via open access. *Plant Pathology* follows the guidelines set out by the Committee on Publication Ethics (COPE). Further information is available at <http://publicationethics.org/>.

For any questions not answered in these guidelines, please contact:

- Editorial Office (for suitability, article format, submission process, peer review)
plantpath@bspp.org.uk
- Production Editor (for copyright, typesetting, printing and online publication)
ppa@wiley.com

Article types

Article type	Description	Abstract words	Article limits
Original Article	A report of research addressing a specific research question, with the methods used, the results of the research, and conclusions	250	Discussion up to 5 pages

drawn from the research			
Review Article	A systematic review of the published literature addressing a specific research question, including an exhaustive search of the literature to date; or a narrative review discussing a particular topic	250	No limit
Review - Plant Pathogen Impacts	A concise review of current information and future perspectives on the worldwide impact (economic, societal, environmental etc) and current/potential mitigation strategies for individual or related groups of pathogens (by host or pathogen species), with a focus on new and emerging diseases	250	Manuscript total up 30 pages (double line spacing), including figures, tables and references
Letter to the Editor	A response to a paper previously published by the journal; or a short communication to the editor about a particular topic	No abstract	Manuscript total up 10 pages (double line spacing), including figures, tables and references

Costs to authors

Submission:	No charge
Page charges:	No charge
Use of colour:	Online no charge In print, 1st figure/table £150, subsequent figures £50 each
Open Access (optional):	£3091 (US\$4641 or €3866)
Offprints:	Free PDF, but charge for printed offprints if chosen

Authorship

All authors must qualify for authorship, and all those who qualify must be listed. Authorship should be based only on

1. Substantial contributions to conception and design, or acquisition of data, or analysis and interpretation of data; **and**
2. Drafting the article or revising it critically for important intellectual content; **and**
3. Final approval of the version to be published; **and**
4. Agreement to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.

Acquisition of funding, the collection of data, or general supervision of the research group, by themselves, do not justify authorship.

The **Submitting Author** is the person who submits (uploads) the manuscript. All communications about the review process will be sent to this person, who is responsible for keeping co-authors informed of progress or queries from editors.

The **Corresponding Author** is responsible for post-acceptance license signing, proof approval, and answering any queries from readers of the journal after publication. *Plant Pathology* names only **one** Corresponding Author on papers during the review

and typesetting process. (A second corresponding author can be added by the corresponding author to the proof if appropriate.)

The Submitting and Corresponding Authors can be the same person, or two different co-authors.

Plant Pathology requires the Submitting Author (only) to provide their ORCID ID when submitting a manuscript (this is a free, unique and persistent identifier for researchers, <http://orcid.org/>).

In accordance with [Wiley's Best Practice Guidelines on Research Integrity and Publishing Ethics](#) and the [Committee on Publication Ethics' guidance](#), *Plant Pathology* will allow authors to correct authorship on a submitted, accepted, or published article if a valid reason exists to do so. All authors – including those to be added or removed – must agree to any proposed change. To request a change to the author list, please complete the [Request for Changes to a Journal Article Author List Form](#) and contact either the journal's editorial or production office, depending on the status of the article. Authorship changes will not be considered without a fully completed Author Change form. [Correcting the authorship is different from changing an author's name; the relevant policy for that can be found in [Wiley's Best Practice Guidelines](#) under "Author name changes after publication."]

Free Format submission

Plant Pathology accepts Free Format submissions.

- Format your manuscript and your references in the style or format you prefer. Be sure to use a consistent format throughout.
 - Line numbering is helpful for the editor and reviewers.
 - References should include author(s) name(s), journal title/book title, article title (where required), year of publication, volume & issue/book chapter, and pagination.
- Be sure to include all the required sections for the manuscript.
 - These may include Title page with author names and addresses, Abstract, Keywords, Introduction, Materials & Methods, Results, Figures and Tables with legends, and any Supporting Information with legends. You should also include acknowledgement of funders, conflict of interest disclosures and a data availability statement.
- Please keep the main text file to <6 MB if possible (e.g. provide large figure files separately from the text)
- Following an initial peer review, you may then need to make adjustments to match the journal style, for example
 - provide all text (main text, tables, legends) in an editable format (.docx files not .pdf)
 - format the manuscript sections according to the article type (see below)
 - provide individual high resolution figure files in one of the accepted file formats if not already supplied

Article preparation support

[Wiley Editing Services](#) offers expert help with English Language Editing, as well as translation, manuscript formatting, figure illustration, figure formatting, and graphical abstract design – so you can submit your manuscript with confidence.

Also, check out our resources for [Preparing Your Article](#) for general guidance about writing and preparing your manuscript.

Artificial Intelligence-generated content

Artificial Intelligence Generated Content (AIGC) tools—such as ChatGPT and others based on large language models (LLMs)—cannot be considered capable of initiating an original piece of research without direction by human authors. They also cannot be accountable for a published work or for research design, which is a generally held requirement of authorship, nor do they have legal standing or the ability to hold or assign copyright. Therefore—in accordance with [COPE's position statement on AI tools](#)—these tools cannot fulfill the role of, nor be listed as, an author of an article. If an author has used this kind of tool to develop any portion of a manuscript, its use must be described, transparently and in detail, in the METHODS or ACKNOWLEDGEMENTS section. The author is fully responsible for the accuracy of any information provided by the tool and for correctly referencing any supporting work on which that information depends. Tools that are used to improve spelling, grammar, and general editing are NOT included in the scope of these guidelines. The final decision about whether use of an AIGC tool is appropriate or permissible in the circumstances of a submitted manuscript or a published article lies with the journal's editor or other party responsible for the publication's editorial policy.

Conflict of interest

Plant Pathology requires that all authors disclose any potential sources of conflict of interest. Any interest or relationship, financial or otherwise, that might be perceived as influencing an author's objectivity is considered a potential source of conflict of interest. These must be disclosed when directly relevant or indirectly related to the work that the authors describe in their manuscript. Potential sources of conflict of interest include but are not limited to patent or stock ownership, membership of a company board of directors, membership of an advisory board or committee for a company, and consultancy for or receipt of speaker's fees from a company. The existence of a conflict of interest does not preclude publication in this journal.

If the authors have no conflict of interest to declare, they must also state this at submission. It is the responsibility of the corresponding author to review this policy with all authors and to collectively list in the cover letter (if applicable) to the Senior Editor, in the manuscript (in the Acknowledgments section), and in the online submission system ALL pertinent commercial and other relationships.

Plagiarism

Submitted manuscripts may be processed through software to detect plagiarism (the unreferenced copying of published and unpublished ideas, writing or illustrations of others in the same or a different language). In submitting your manuscript you accept that it may be screened against previously published literature. Plagiarized manuscripts will be rejected immediately.

Image integrity

Please follow best practice for the preparation of manuscript figures.

1. Splicing together of separate images to present them as a composite image is not acceptable. Wherever multiple images belonging to different source micrographs, or gel blots, or photographs are grouped together, please add clear dividing space or dividing lines between separate images and indicate in the legend where and what the images represent.
2. In instances where specific lanes are removed from gel images, or marker lanes added to a gel image, this should be made clear in the image by adding clear dividing space or dividing lines between separate images and indicating in the

legend where and what the images represent.

3. Removal, addition, alteration, enhancement, or obstruction of any particular feature within an image is not acceptable. This is also applicable for features that are part of the background of an image. Please do not alter/clean the background of an image for presentational purpose.
4. Gel blot images with extreme adjustments to contrast (white background) are not acceptable. In the interest of transparency, please use original and unedited gel blot images in the manuscript figures.
5. Linear adjustments made to the image as a whole are acceptable, if they do not misrepresent the originally captured information in the image. Selective, non-linear adjustments to only parts of the image are not acceptable.
6. Re-use of an entire image or part of an image (e.g., loading controls or marker lanes) in the same figure or multiple figures within the manuscript is acceptable only when clearly stated and justified in the figure legend or methods section of the manuscript.
7. Images from previously published articles (e.g., loading controls or marker lanes) should not be re-used.

Figures may be checked for image manipulation using image analysis software.

Open Science initiatives

Recognizing the importance of research transparency and data sharing to cumulative research, *Plant Pathology* encourages the following Open Research practices.

Availability of scientific material

Submission to *Plant Pathology* is on the understanding that materials described will be made available upon request. Sequence data should be submitted to any of the 3 major databases (DDJB/EMBL/GenBank), with accession numbers incorporated into the text. Authors are encouraged to deposit phylogenetic trees and data used to generate them in TreeBASE (treebase.org) and cite the accession number(s). If there are any restrictions on the sharing of materials, these must be stated in both the covering letter and Materials and Methods. Any intellectual property (IP) restrictions must also be made clear.

Data sharing and data accessibility

Plant Pathology expects that data supporting the results in the paper will be archived in an appropriate public repository. A full description of the policy is given at [Wiley Author Services](#). Authors are required to provide a Data Availability Statement to confirm the presence or absence of shared data. Sample statements are available [here](#).

If you have shared data, the Data Availability Statement will describe how the data can be accessed, and include a persistent identifier (e.g., a DOI for the data, or an accession number) from the repository where you shared the data. The repository that you choose should offer you guaranteed preservation (e.g., the registry of research data repositories at <https://www.re3data.org/>) and should help make it findable, accessible, interoperable and re-useable. Whenever possible the scripts and other artefacts used to generate the analyses presented in the paper should also be publicly archived.

If shared data are not in a repository but are available by application, then the Data

Availability Statement must include who (e.g., corresponding author) to contact to request access to the data.

If sharing data compromises ethical standards or legal requirements (e.g., to protect confidential or proprietary information) then authors are not expected to share it. If you cannot share the data described in your manuscript, or do not intend to share the data, then you must still provide the appropriate Data Availability Statement ("Research data are not shared").

Ethics of experimentation

In cases where animals or harmful substances have been used for the research, the Journal will only accept papers in which there is evidence that this work has been conducted ethically. The care and use of experimental animals must comply with all relevant local animal welfare laws, guidelines and policies, and a statement of such compliance should be provided to the Journal Editor. Where possible, alternative procedures that replace the use of animals, either partially or completely, for example in vitro biological systems, should be used. Where this is not possible, the minimum number of animals should be used and pain and suffering reduced, consistent with attaining the scientific objectives of the study. All reasonable steps must be taken to ensure the humane treatment of animals, so as to minimize discomfort, distress and pain. Animals in pain or moribund should be painlessly killed according to local euthanasia regulations. The journal encourages corresponding authors of manuscripts involving animal research to refer to the ARRIVE guidelines (<http://www.nc3rs.org.uk/ARRIVE>) before submission of a manuscript.

Human investigations

Manuscripts reporting data obtained from research conducted in human subjects must include assurance that informed consent was obtained from each person. In addition, the manuscript must include assurance that the study protocol conformed to the ethical guidelines of the 1975 Declaration of Helsinki as reflected in approval by the institution's human research review committee. A statement to this effect must be provided within the Methods section.

Research article format

These articles consist of a Main Text file, with each Table, each Figure and each Supporting Information file as individual files.

File	File type	Font	Line spacing	Line numbering	More information
Main Text	Word	Any standard	Double-spaced	Yes	—
Table (1 table per file)	Most document files	Any standard	Any	No	Put legend with Table
Figure (1 figure per file)	Most image files	Any	Any	No	Full page size 17 cm (wide) × 22 cm Half-page size 8 cm wide Put legend at end of Main Text file

Supp Info (online only)	Any	Any	Any	No	Put legend in Supp Info file AND at end of Main Text file
-------------------------	-----	-----	-----	----	---

Main text

The Main Text of a research article uses the order:

- Title page
- Abstract
- Introduction
- Materials and methods
- Results
- Discussion
- Acknowledgements
- Data availability statement
- References
- Supporting Information legends
- Figure legends

Title page

- Title informative and not more than 30 words
- Authors listed
- Addresses at which the work was carried out after all the names
- The present addresses of the authors, if different from the above, should appear in a footnote
- Corresponding author e-mail address provided (one author only)
- Keywords – provide up to 6

Abstract

- Indicate why and how the work was done, the result and conclusions
- 250 words or less
- Abstracts should not be unnecessarily descriptive and must, where appropriate, contain quantitative data

Introduction

- Describe, succinctly, the current state of work in the relevant field
- Describe the reasons for carrying out the experiments
- Give a clear statement of the objectives and hypotheses being tested

Materials and methods

- Sufficient information must be given in this section to allow the reader to understand the experimental design and statistical methods used in the data analysis. All experiments should have adequate replication and, where relevant, should have been repeated for confirmation.

- Système International (SI) units are preferred. Others should be related to SI units at the first mention.
- Commercial equipment and products used in experiments should name the product and company, but addresses should be omitted
- State the methods used, e.g., analysis of variance (ANOVA) and ensure that the analysis method chosen is appropriate for the data. Indiscriminate use of multiple range tests should be avoided.
- Molecular marker data need to be properly replicated using appropriate positive and negative controls and provide an assessment of error rates based on independent DNA extractions

Results

- Results should be presented in an orderly fashion
- Make use of tables and figures where necessary and without duplication
- Data tables presenting, for example, mean values should include the appropriate standard errors (*SE*) and degrees of freedom (*df*) relevant to the *SE*. Where comparisons are made between data values care should be taken to ensure that the *SE* values quoted are suitable for the comparisons.

Discussion

- Discussion is presented separately from the Results
- No subheadings in this section
- Focus on the work presented and its relationship with other relevant published work
- It should not digress widely into general discussion of a research area, or into excessive speculation

Acknowledgements

- Sources of funding should be listed
- All contributors who do not meet the criteria for authorship should be listed (e.g., technical help, data analysis, writing assistance or general support)
- Provide details of any conflict of interest

Data availability statement

- Presence or absence of shared data
- Repository name and data reference number, URL, DOI, if data shared
- Example statements are shown below

Availability	Data availability statement in text
Data openly available in a public repository that issues datasets with DOIs	The data that support the findings of this study are openly available in [repository name e.g "figshare"] at http://doi.org/[doi] , reference number [reference number].

Data openly available in a public repository that does not issue DOIs	The data that support the findings of this study are openly available in [repository name] at [URL], reference number [reference number].
Data derived from public domain resources	The data that support the findings of this study are available in [repository name] at [URL/DOI], reference number [reference number]. These data were derived from the following resources available in the public domain: [list resources and URLs]
Embargo on data due to commercial restrictions	The data that support the findings will be available in [repository name] at [URL / DOI link] following an embargo from the date of publication to allow for commercialization of research findings.
Data available on request due to privacy/ethical restrictions	The data that support the findings of this study are available on request from the corresponding author. The data are not publicly available due to privacy or ethical restrictions.
Data subject to third party restrictions	The data that support the findings of this study are available from [third party]. Restrictions apply to the availability of these data, which were used under license for this study. Data are available [from the authors / at URL] with the permission of [third party].
Data available on request from the authors	The data that support the findings of this study are available from the corresponding author upon reasonable request.
Data sharing not applicable – no new data generated	Data sharing is not applicable to this article as no new data were created or analysed in this study.
Author elects to not share data	Research data are not shared.

References

- Use of a tool such as EndNote, ReadCube or Zotero is recommended
- In the text, cite by author and date; place multiple citations in author alphabetical order
 - If >1 citation for an author, then place these citations in chronological order (e.g., Hanson & Hill, 2012, 2014; Ruppel, 1991; Windels et al., 2004)
- In the References section, place in author alphabetical order
- If possible, please try to use the examples below for style ('Harvard style')

Type	Example in main text	Example in References section
Unpublished data ^a	(A. Scientist, Research Institute, City, Country, date, personal communication)	Not included

Preprint journal article	Haueisen et al. (2017)	Haueisen, J., Möller, M., Eschenbrenner, C.J., Grandaubert, J., Seybold, H., Adamiak, H. et al. -----------------	---------------	---

^aAuthors must have written permission from colleagues to include their work as a personal communication and provide this as a 'Supplementary Material Not for Review' file to be available to the editor.

^bPapers 'in press' that are not yet available as a DOI should be submitted as an 'Additional File for Review but Not for Publication' file to be available to the editor.

^cConference proceedings that are not available online, or have not been formally published but are only available to people who attended the conference, should not be included. Such work should instead be described as unpublished data (i.e. 'personal communication').

Tables

- Self-explanatory with an appropriate legend without abbreviations
- Identify tables using a number, e.g. Table 2
- Mention tables in the text in numerical order (Table 1, then Table 2 etc)
- Use superscript lower case letters for footnotes, e.g. ^a, ^b and ^c
- Individual file for each table
- Save file in an editable format, e.g. .DOCX
- **Not** embedded as an image
- If the table is very large, make it a Supporting Information file

Figures

- Identify figures using a number, e.g. Figure 2
- Number in a separate series from the Tables
- Mention figures in the text in numerical order (Figure 1, then Figure 2 etc)
- Subdivisions within figures should be labelled with letters, e.g. (a), (b) and (c)
- Photographs as .JPG or .TIF format, at least 300 dpi at final size
- Graphs, charts and line art as .EPS or .PDF format
- Combinations of photos and text labels as .EPS or .PDF with the photo image at least 300 dpi, or in .TIF format at 600 dpi
- Individual file for each figure
- Magnification in photographic figures should be shown by a scale or bar
- Avoid using tints if possible; if shading is essential to the understanding of the figure, try to make it coarse
- Colour figures should be used when details cannot be adequately observed on black and white photographs
- Please consider colour-blind readers – avoid the use of red/green contrasts if possible
- Authors pay the full cost for the reproduction of their colour artwork in the print issue

- Figures that are black-and-white in the print issue but colour in the online version are free of charge
- Legends should be included at the end of the main document, self-explanatory and without abbreviations
- First 100 characters of the legend should describe key aspects of the figure, for the abbreviated links used in the online version
- For detailed information on our digital illustration standards, please go to https://authorservices.wiley.com/asset/photos/electronic_artwork_guidelines.pdf

Supporting Information for online publication

- Supporting Information gives the opportunity to present large datasets or data in different formats than traditional print media, e.g. video
- Electronic files for online publication must be submitted for the review process, uploaded as separate files and given the file designation 'Supplementary Material for Review'
- Please try to restrict individual files sizes to 10 MB maximum (zipped or unzipped)
- Provide a brief title for each item intended for online publication at the end of the main manuscript (figures and tables and other files)
- Material will not be copyedited or typeset by the publisher – it will be published in the format you provide it in
- For more information on preparing Supporting Information, please go to <https://authorservices.wiley.com/author-resources/Journal-Authors/Prepare/supporting-information.html>

Other files for information

- Articles cited as 'in press' but not yet available for public access should be uploaded for the reviewers as 'Additional File for Review but Not for Publication'
- Written permission from any colleagues whose unpublished work you include as a 'personal communication' should be provided as 'Supplementary Material Not for Review'

Review Article format

Reviews that are timely and critical are welcomed.

As for Research Articles (above), the Main Text, each Table, each Figure and each Supporting information file are requested as individual files.

The Main Text of a review article uses the order:

- Title page
- Abstract
- Sections as appropriate to guide the reader
- Acknowledgements
- References

- Supporting Information legends
- Figure legends

Please remember that if you re-use any tables or figures from other papers, then you will need to obtain copyright clearance from the original source journal.

Review – Plant Pathogen Impacts format

Potential authors are invited to submit outlines to the Senior Editor for approval before preparing their manuscripts. This type of Review will be peer-reviewed and will be made 'Free Access' on publication.

Articles should provide current information and future perspectives on the worldwide impact (economic, societal, environmental etc.) and current/potential mitigation strategies for individual or related groups of pathogens (by host or pathogen species), with a particular focus on new and emerging diseases.

This type of Review must be concise (no more than 30 pages of double spaced A4, including references, figures and tables).

As for Research Articles (above), authors are requested to provide the Main Text, each Table, each Figure and each Supporting information file as individual files.

The Main Text of a Plant Pathogen Impact Review uses the order:

- Title page
- Abstract
- Sections as appropriate to guide the reader
- Acknowledgements
- References
- Supporting Information legends
- Figure legends

Please remember that if you re-use any tables or figures from other papers, then you will need to obtain copyright clearance from the original source journal.

Letter to the Editor format

We encourage opinion articles/letters related to recently published papers, particularly but not exclusively those in *Plant Pathology*, whereby implications of the paper are considered and the paper is put into a historical context. We also welcome short communications to the editor about a particular topic.

There is no abstract. Letters should be short, up to 10 pages double-spaced manuscript including figures, tables or references.

Pre-submission checklist

Permissions	
☆	Co-authors have all seen and approved the submitted version
☆	Colleagues whose data is cited as unpublished or personal communication have

given their written permission for their data to be included (upload as 'Supplementary Material Not for Review')

- ☆ Tables or figures that have been published before need permission from the copyright holder to re-use them (upload as 'Supplementary Material Not for Review')
- ☆ Maps and images from internet sources need permission from the copyright holder to re-use them. Obtain the permission and use the correct attribution statements and upload as 'Supplementary Material Not for Review' or indicate in the cover letter if the image is copyright-free

Authors

- ☆ Have your ORCID number ready to enter with your name and contact details
- ☆ Have the email address(es) of your co-author(s) ready
- ☆ Name ONE corresponding author to handle the proof
- ☆ Ask co-author(s) if there are any conflicts of interest to declare (include in a COI file to upload and also in the Acknowledgements)

Manuscript

- ☆ Title page and abstract are included in the manuscript text file
- ☆ Run the 'spell checker' and 'grammar checker' on your manuscript
- ☆ Check all tables, figures, and supporting information are mentioned in the text
- ☆ Check all references mentioned in the text are provided in the Reference list, and vice versa
- ☆ Separate figure files and table files from the main text
- ☆ Main text file is editable (e.g., .DOCX), not a .PDF
- ☆ Figure legends **and** Supporting Information legends (all types of Supp Info file) are included at end of main text
- ☆ Total size of all files is less than 60 MB

Materials

- ☆ Voucher cultures and specimens deposited in recognized collections
- ☆ Accession numbers obtained for nucleotide sequences
- ☆ TreeBASE number obtained for phylogenetic data
- ☆ If you cite papers 'in press' that are not yet publicly available with a DOI, provide a copy as 'Additional File for Review but Not for Publication'

Data

- ☆ Data sets archived in publicly accessible repository if possible
- ☆ Data Availability Statement in text

Reviewers

- ☆ Be able to provide the name and current email address of at least 1 potential reviewer (**not** colleagues or collaborators)
- ☆ If you know of close colleagues, or rivals, who would be unsuitable as reviewers, include your (confidential) reasons in your cover letter

Cover letter

- ☆ Names of any people (collaborators or rivals with a conflict of interest) you do not wish to review the manuscript, with reasons
-

-
- ☆ Confirmation statement that figures or tables from previously published work are copyright-free

Acknowledgements

- ☆ Check details of organizations that funded the work and any grant/award numbers
-

Submission process

The *Plant Pathology* online submission site is through the portal <https://wiley.atyponrex.com/journal/PPA>.

Please contact the Editorial Office (plantpath@bspp.org.uk) in case of any difficulties – friendly help is available!

You will receive an e-mail acknowledgement after successful submission.

If there are any small problems or matters that the Editorial Office cannot fix for you (e.g. missing files), then the Editorial Office will contact you as quickly as possible for corrections, so that the review of your paper is not delayed too much.

Review process

Plant Pathology uses single-anonymized peer review.

Submissions that are out of scope may be rejected without external peer review.

The Senior Editor will appoint a member of the Editorial Board to manage each new submission. The Editor will generally appoint two anonymous reviewers to report on the suitability for publication. You may suggest the names of potential reviewers – these should not be recent collaborators. If there are people that you would prefer **not** to be used as reviewers, please provide your (confidential) reasons in the cover letter to the Senior Editor.

The reviewer reports are not published.

The Senior Editor will make a final decision based upon their own judgment and the recommendations of the reviewers and Editor. The process from submission to first decision currently takes 28 days on average.

You and your co-authors can follow the progress of your manuscript at any time by checking its status updates in your respective Author Centre(s) at <http://mc.manuscriptcentral.com/pp>.

If a manuscript is returned to you for revision prior to final acceptance, you have 2 months to supply the revised version. Revised manuscripts that are returned later will be considered to be a new submission and subject to full review.

Following acceptance

Graphical abstract

Plant Pathology uses Graphical Abstracts in the online issue Table of Contents to introduce and expand on your research in a more visual and dynamic way. After acceptance of the manuscript, you will be asked by the editorial office to submit a self-explanatory graphical abstract. This is **an essential requirement** before the manuscript can be forwarded to production. You should:

- prepare a **text file** with:

- your article title
- all authors' names (corresponding author indicated by an asterisk)
- a 1-sentence summary (200 characters limit) of the key findings presented
- .docx or .doc format
- name file as 'Graphical abstract'
- prepare a **figure file**
 - .tiff or .eps format
 - represents the scope of the paper
 - 50 × 60 mm or less
 - 300 dpi minimum resolution
 - avoid fine detail in graphs and other figures because of the relatively small size of this image online
 - name file as 'Graphical Abstract'
- **upload both files** to ScholarOne Manuscript when you receive the link from the editorial office

Examples:

☐ **Soil management in a mountain agroecosystem and clubroot disease**

A. S. Bhering, M. G. F. Carmo, I. S. Coelho, E. S. A. Lima, C. F. de Carvalho, A. L. R. F. Saraiva, S. R. Passos, N. M. B. Amaral Sobrinho

Version of Record online: 11 December 2019

[Abstract](#) | [Full text](#) | [PDF](#) | [References](#) | [Request permissions](#)

☐ **Maturation of resting spores of *Plasmodiophora brassicae* continues after host cell death**

F. Al-Daoud, B. D. Gossen, M. R. McDonald

Version of Record online: 10 December 2019

[Abstract](#) | [Full text](#) | [PDF](#) | [References](#) | [Request permissions](#)

Image integrity check

Upon acceptance of your manuscript, all figures of your manuscript will undergo an integrity check. In case of any doubt, raw data will be requested. Publication will only proceed on the condition that all final files comply with the journal integrity checks. In the event that any file does not comply with our integrity checks, the journal reserves the right to rescind this decision, or, alternatively, you may be contacted to resolve any concerns raised by these checks.

Cover image

The Senior Editor welcomes high quality images, suitable for the cover of *Plant Pathology*. Any prospective front cover images should be sent to the Editorial Office (plantpath@bspp.org.uk) following acceptance of the manuscript.

Open Access (optional)

Open Access is available as an option for authors of primary research articles who wish to make their article available to non-subscribers on publication, or whose funding agency requires grantees to archive the final version of their article. With Open Access the author, the author's funding agency, or the author's institution pays a fee to ensure that the article is made available to non-subscribers upon publication via Wiley Online Library, as well as deposited in the funding agency's preferred archive. For the full list of terms and conditions, see <https://authorservices.wiley.com/author-resources/Journal-Authors/open-access/hybrid-open-access.html>.

If you want your article to be open access please choose the appropriate licence agreement when you log in to the Wiley Author Services system. Click on 'Make my

article Open Access' and choose the appropriate license by clicking on 'Sign license agreement now' when you log in to the Wiley Author Services system.

RCUK/WT Funder mandate authors only

If your paper is accepted, the author identified as the formal corresponding author for the paper will receive an email prompting them to login into the Wiley Author Services where via the Wiley Author Licensing Service (WALS) they will be able to complete the license agreement on behalf of all authors on the paper.

For authors signing the copyright transfer agreement

If the Open Access option is not selected, the corresponding author will be presented with the copyright transfer agreement (CTA) to sign on behalf of all the authors. The terms and conditions of the CTA can be previewed in the samples associated with the Licensing Info & FAQs (<https://authorservices.wiley.com/author-resources/Journal-Authors/licensing-and-open-access/licensing/licensing-info-faqs.html>).

For authors choosing Open Access

If the Open Access option is selected, the corresponding author will have a choice of the following Creative Commons License Open Access Agreements (OAA):

Creative Commons Attribution Non-Commercial License OAA

Creative Commons Attribution Non-Commercial -NoDerivs License OAA

To preview the terms and conditions of these open access agreements please visit the Licensing Info & FAQs in Wiley Author Services.

If you select the Open Access option and your research is funded by The Wellcome Trust and members of the Research Councils UK (RCUK) you will be given the opportunity to publish your article under a CC-BY license supporting you in complying with Wellcome Trust and Research Councils UK requirements. For more information on this policy and the Journal's compliant selfarchiving policy please visit: <https://authorservices.wiley.com/author-resources/Journal-Authors/licensing-and-open-access/open-access/funder-agreements>.

Colour in figures/tables

If the figures or tables in your manuscript contain the use of colour (e.g., colour photographs, graphs using colour lines or data points, diagrams or tables using colour shading to highlight text), there is a charge for use of colour in the printed article. There is no charge for use of colour in the online version. You will be invited to make this choice when your typeset article is available online on Early View.

Tracking your paper's progress after acceptance

Wiley Author Services enables authors to track their article through the production process to publication online and in print. Authors can choose to receive automated e-mails at key stages of production. The corresponding author will receive an e-mail with a unique link inviting them to register for Wiley Author Services. Visit <https://authorservices.wiley.com/home.html> for more details.

Proofs

The corresponding author will be notified by e-mail when the proofs are available to check online. Authors should correct their proofs promptly (preferably within 2 days). Major alterations to the text may be charged to the author and will delay publication.

Social media

The journal will try to tweet about your paper when it is officially published. If you have some particular text, image, handle or hash tag that you would like to be included in a tweet, please contact the Editorial Office (plantpath@bspp.org.uk).

Article promotion support

Wiley Editing Services offers professional video, design, and writing services to create shareable video abstracts, infographics, conference posters, lay summaries, and research news stories for your research – so you can help your research get the attention it deserves.

The published article

EarlyView

Plant Pathology is covered by Wiley-Blackwell's EarlyView service.^[1] The EarlyView article is the complete full-text article published online as soon as it is ready, not waiting for the next print issue. EarlyView articles are in final form; no changes can be made after publication. EarlyView articles are 'published' (i.e. the 'Version of Record') and are citable immediately using the DOI. After print publication, the DOI remains valid and can continue to be used to cite and access the article.

More information about DOIs can be found at <http://www.doi.org/>.

Print version

There are 9 printed issues per year. Articles are assigned to an issue as soon as possible. The order of publication may vary slightly from the order of acceptance due to physical limitations of the printing and binding processes.

Offprints

To receive a free PDF offprint, the author must sign up to Wiley Author Services.

Additional printed offprints may be ordered online at <http://offprint.cosprinters.com>. Printed offprints are posted to the correspondence address given for the paper unless a different address is specified when ordered. Note that it is not uncommon for the printed offprints to take up to 8 weeks.

Author name change policy

In cases where authors wish to change their own name following publication, Wiley will update and republish the paper and redeliver the updated metadata to indexing services. Our editorial and production teams will use discretion in recognizing that name changes may be of a sensitive and private nature for various reasons including (but not limited to) alignment with gender identity, or as a result of marriage, divorce, or religious conversion. Accordingly, to protect the author's privacy, we will not publish a correction notice to the paper, and we will not notify co-authors of the change. Authors should contact the journal's Editorial Office with their name change request.
